

Implementing the initial phases of a secondary plan in Fredericton's Southeast neighbourhood

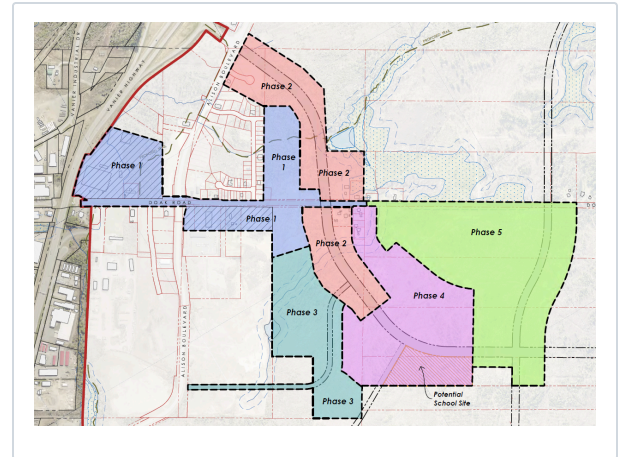

zzap

The Southeast Secondary Plan is the City of Fredericton's blueprint for a fourth growth node – a complete community of **5,000-7,000 residents** on roughly **200 hectares** at the city's edge.

What makes it different: the **City owns 65%** of the plan area overall – and **100% of Phases 1 and 2**. Public ownership shifts the question from *"what should we allow?"* to *"what should we build, in what order, and on what terms?"*

This work was led by the City of Fredericton's Planning & Development team, in partnership with **zzap Architecture + Planning** and **EXP Services**. Two rounds of public engagement (March–April and August–October 2025) shaped the framework.

Our session focuses on the part most plans skip: **the sequencing**. The framework already decides what goes where – the workshop asks how **Phases 1 and 2 actually build out** at a scale, mix, and orientation that adds up to a complete community.

PHASING – JAN 28, 2026 PLAN

THE PLAN

VISION • PULLED FROM ROUND 2 ENGAGEMENT

"Proactive, innovative, bold – with first phases that set the stage for everything that follows."

~200 ha

Plan area

100%

City-owned in Phases 1 & 2 (65% overall)

5-7K

Residents at build-out
(2046)

6 phases

Sequenced delivery

Architecture + Planning, working together. zzap

FROM PRIVATE DEVELOPMENT INTO THE PUBLIC REALM

We're zzap. We design places + the plans that get them built.

Architecture and planning have lived on opposite sides of a wall for too long. We don't.

zzap is a Dartmouth-based architecture and planning practice. For most of our history we've worked with private developers – designing buildings while quietly fixing the planning problems that made them hard to build.

Southeast Fredericton is part of a deliberate move into **municipal secondary planning**. We bring two things most planning teams don't: **built-form fluency** (we've designed the things plans make possible) and **delivery instinct** (we know what kills a project at site-plan stage).

What we believe: a plan that can't be built is a brochure. The work isn't writing the policy – it's **sequencing the moves** so the policy survives contact with infrastructure, ownership, and time.

If you're a municipality with a growth area, public land, or a stalled secondary plan – we'd like to talk.
